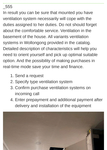
Ventilation system and its varieties

Closet and fresh air is the pledge of health. Very important that it would be comfortable to be in a room the street in the city of Wollongong, but also at home or at work. Within this task allow to cope. For division of ventilation systems into varieties there are several parameters. Ventilation and air conditioning systems The first can be called the principle of functioning. It can be: natural, mechanical, combined. In the first case, the ventilation system operates on the principle of fresh and purified air from the street, which removes polluted from the room through door and window openings. The principle of operation of the exhaust system is familiar to many on the example of kitchen exhaust systems, without which no apartment in Wollongong can do. The second option is a more specialized installation for cooking food. Supply and exhaust ventilation device. With her help, polluted air is removed from the room, passing necessary degrees of purification. However, the best variant of ventilation is combined, which connects the supply and exhaust systems. Thanks to it, the processes of removal of polluted and inflow of clean air are



Supply and exhaust ventilation system in the city of Wollongong capable provide clean circulation of air in any room. Depending on what area the ventilation system captures, it is possible to define local and general exchange of its varieties. Local used in the case when there is an opportunity to remove polluted air directly from the source of pollution. Local ventilation applied both at home and at work. Disadvantages of local ventilation: it is effective when removal polluted air does not work into ventilation, for natural reasons, more will suit in Wollongong is a general exchange ventilation system. It will cope with cleaning of the entire room. The structure of components of ventilation systems also divides them into two variants: typewriting and monoblock. First, ventilation units are made in the form of a set of remotely from each other. In a monoblock all structural elements are located in one housing. The monoblock system has economic advantage, since equipped with equipment that isolates manifesting during operation of devices, noise.
